CONTROL EVERYTHING

T I S   A D S   R E L A Y

Modern interior design evolves as new trends emerge, and coping with these changes is often a challenge because of limitations in building construction or wiring schemes. Enabling users to mitigate those limitations is one of our priorities, and we try to design adaptable products that fit into your smart home any time you want.

TIS ADS 3 Relay Module is a small solution with great functionality. It helps add more lighting options to your smart home, meaning that if you need to brighten up your living room or set the mood for your new mini bar in the corner, this solution is what you need.

The lighting of roof gardens, libraries, kitchenettes, and similar spaces is easily modernized with our ADS 3 Relay Module. However, this solution does more than that. If installed next to a curtain motor, this TIS ADS product can provide more shade, shutter, and curtain control as well. You can add more coverage to your windows and prevent harm to your furniture with no worries.

Also, this module works with the BUS network. Therefore, even if your house was built decades ago, it is still possible to install it and enjoy all of its capabilities. With TIS's ADS 3 Relay Module, you can redesign your house whenever you desire without having to compromise on quality or appearance.

We help you create more convenience. It is our small ideas that make big changes.
